

Tumor (Age 30, Female)

I am a US Air Force pilot and was diagnosed with a brain tumor the size of a golf ball. I was devastated. When I heard about AIC therapy, I participated in the AIC treatment for three months before getting another brain scan at the Washington Bethesda Medical Center. The doctor asked me incredulously, "How come I do not see the tumor?" - Merry

Arthritis (Age 53, Female)

I had terrible pain due to the knuckle and knee arthritis. Every night I put on heating pads to alleviate the pain, but continuing pain made the quality of my life miserable, and I came down with depression. Then one of my caring friends recommended AIC Therapy, and both the pain and swelling improved significantly. I am amazed. - M. Kim

Chronic Kidney Disease (Age 65, Male)

From the patient's doctor:

My client yesterday made me feel most satisfied. He started on AIC therapy about a month ago and shared with me that he can now walk for half an hour every day and do the things he could not do a month ago. He feels happier; his pain levels have gone from 9 to 6 in one month. He reduced his insulin from about 14 units to only two under a nurse's supervision (his wife). His energy has risen, his brain fog is gone, and he can now remember facts better. His gout flare-ups are shorter and less severe, too. - C. Park

Autism with Epilepsy (Age 16, Female)

Diagnosis:

Diagnosed with ASD at age 2.5 & developed a grand mal seizure on July 6, 2014.

Medical/Personal Timeline:

Received stem cell treatment in Germany in 2012 when she was 7 years old. 4 treatments in 2 years and seizures developed after the treatment.
tDCS (Transcranial Direct Current Stimulation) 4 sessions in 2018. Seizure increased to 2 times a month after the tDCS treatment.

July 2019 Started AIC Ionic Calcium Therapy

December 2019	28 days without a seizure.
July 2020	35 days without a seizure
January 2021	41 days without a seizure
March 2021	54 days without a seizure
July 2021	66 days without a seizure
January 2022	86 days without a seizure

MS. M HOLT | 80, FEMALE
Multiple Myeloma Remission under AIC Therapy

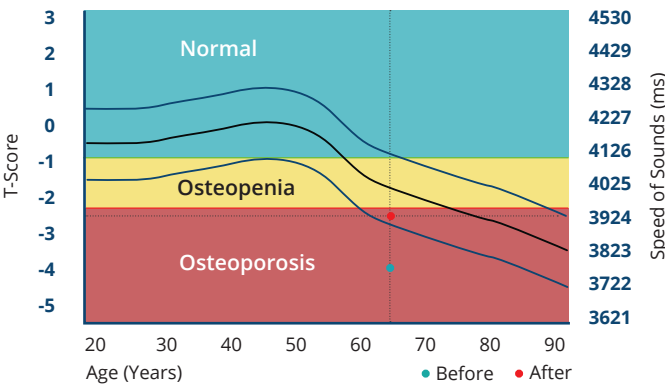

2012 Diagnosed with Multiple Myeloma
2013 Started AIC Therapy
2015 Fully Recovered in 14 months.

- Ms. Holt's hematological data, such as platelet, WBC, and neutrophil, have normalized and were later declared cancer-free.
- Ms. Holt's kidney, damaged by chemo, has recovered. (GFR bounced up from 12 to 62, to a normal range for her age)
- Ms. Holt's BMD score also has significantly improved after treatment with AIC, fully recovering from osteoporosis. (T score increased from -3.6 to -0.9, back to the normal bone density)

Date	WBC	Hemoglobin	Platelet	Neutrophil
11/27/2013	2,190	9.4	35,000	890
2/18/2014	3,370	11.3	55,000	1,540
8/5/2014	4,160	11.5	101,000	2,160
1/27/2015	4,760	11.4	152,000	2,560

OSTEOPOROSIS SAMPLE CASE | 62, FEMALE

T-Score Increase: 1.2 (Significant Improvement)
From severe osteoporosis to osteopenia in 6 months.

01/23/2015 (Before)

Age: 62 | T- Score: -3.9
Z-Score: -1.9 | SOS: 3740

04/22/2015 (After)

Age: 63 | T- Score: -2.7
Z-Score: -0.7 | SOS: 3877

RECOMMENDED AIC THERAPY PRODUCTS

MaraGen

For Reversing the Disease Momentum

CartiGen

For Improving the Wear & Tear of Diseased Joints

DentiGen

For Strong Dental Bones & Healthy Gums

AlziGen

For Improved Memory & Mental Cognition

MegaGen

For Maintaining Stronger Immune System & Healthy Bones for 13 years old and up.

Osso Jr

For Stronger Immune System and Brain Focus for kids up to 12 years of age.

DOSING GUIDELINE & DURATION OF TREATMENT

AIC is mixed with water at a 1:100 ratio and taken on an empty stomach at least 30 minutes before or 2 hours after any food intake. 2 to 4 doses per day are recommended, depending on the disease.

AIC is not a symptom-targeted therapy and, therefore, may take many months to experience noticeable effects. A minimum of three months of treatment is recommended.

Note: AIC applied products are available through qualified and participating health practitioners only. If you are an interested practitioner, please sign up for an account today at AICTherapy.com to learn about our practitioner's program.

WE INVENTED
NEW CALCIUM CARBONATE.

Direct ionic absorption triggers unique healing pathways, bringing cellular & systemic calcium homeostasis by restoring cell communications.

THE CALCIUM DILEMMA

A survey of space station astronauts found that their bone strength dipped by an average of 14% during their half-year stay in orbit. Why? Because bones need challenges to convert protein calcium to ionic calcium for all calcium needs, protein calcium is under-utilized in the absence of gravity, forcing bone resorption to supply the needed ionic calcium (Ca²⁺). This compromised conversion from inactive protein-form to active ionic-form of calcium is the greatest challenge for astronauts' bone health in space.

However, a similar process happens to us as we become more sedentary with fewer challenges to our bones. Combined with stress, age-related hormonal changes, accumulation of toxins, and unhealthy diets & lifestyles that fuel ionic calcium deficiency, deteriorating bone health is inevitable with aging as calcium utilization struggles alongside already compromised calcium absorption.

Moreover, modern research confirmed that bone loss causes **cellular calcification** that amplifies health risks beyond increased fracture risks and is now considered one of the major causes of chronic degenerative diseases. **Bone health now reflects our overall health.**

STRONGER BONES MEAN HEALTHIER LIFE

- 1 Bone density reaches a peak around age 35 and starts to decrease quickly. Women after menopause experience a sharper decline than men, posing a higher risk of **osteoporosis**.
- 2 With bone loss, **cellular calcification** often occurs, disrupting delicate cellular calcium homeostasis, which leads to oxidative stress, calcium signal distortion, and mitochondrial dysfunction.
- 3 Cellular calcification is now considered a significant cause of 150+ chronic degenerative diseases by compromising our body's natural ability to defend against the disease.

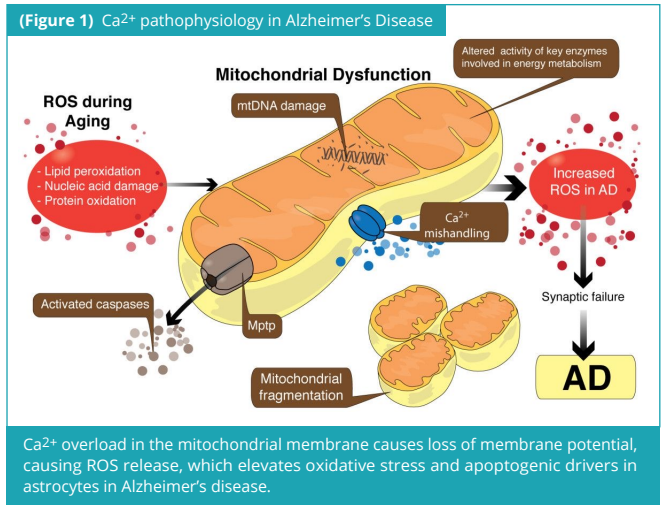

WHY IS CALCIUM SO IMPORTANT?

Complex calcium-wave signals created by the influx and efflux of Ca²⁺ between cellular spaces and organelles generate precise signals that instruct specific cellular functions. When this crucial and essential signaling is compromised, cells malfunction, and we become vulnerable to over 150 degenerative diseases such as heart failure, Alzheimer's, autoimmune diseases, metabolic syndrome, and even cancer. Unfortunately, cellular calcium signaling dysfunction happens to all of us as we age.

- Muscle and heart contractions
 - Bones and teeth
 - Blood clotting
 - Stem cell regulation
 - Neurotransmitters
- Hormone secretions
 - Enzyme activation
 - Correct immune response
 - Cell membrane stability
 - Cell functions and DNA replication

CALCIUM DYSFUNCTION & DISEASES

Critical cellular processes such as ongoing DNA transcriptions depend on accurate ionic calcium wave signals, but aging-related cellular calcification distorts this crucial signaling, causing cellular confusion. Many researchers point out **perturbed calcium signals** as the leading cause of mitochondrial dysfunction, elevating oxidative stress and damaging DNA and RNA, rendering our body susceptible to degenerative diseases such as Alzheimer's and Parkinson's. (See Figure 1)

CAT 1 | TYPICAL AGING

Most people fall under this category. Overactive parathyroid hormone (PTH) increases bone resorption with aging, resulting in weaker bones and body-wide calcification, posing vulnerability to 150+ degenerative diseases.

CAT 2 | ACTIVE & HEALTHY AGING

A healthy diet and a bone-challenging active lifestyle slow down aging by keeping bones stronger with less cellular calcification. The onset of calcium-related 150+ degenerative diseases is delayed.

CAT 3 | ON AIC PROTOCOL

AIC ionic calcium therapy triggers a strong bone formation process that brings body-wide decalcification and restores cellular calcium homeostasis to help fight 150+ degenerative diseases.

INTRODUCING

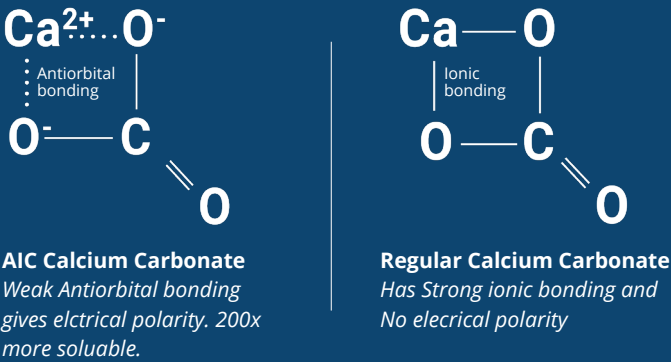

THE SCIENCE BEHIND AIC THERAPY

AIC (Antiorbital Ionic Calcium) is the world's first **calcium-ion-delivery system**, which safely and effectively elevates the serum ionic calcium concentration to a level that triggers a cascade of hormonal responses that strengthens bone, clears calcification, and corrects cellular calcium signaling.

By replacing strong ionic chemical bonding with weaker anti-orbital bonding in calcium carbonate molecules, the new calcium carbonate (AIC) releases enough calcium ions for direct ionic absorption through the stomach walls to safely trigger natural healing pathways. With unique absorption and healing pathways, AIC therapy truly offers exciting anti-aging treatment against degenerative diseases.

UNIQUE MOLECULAR PROPERTIES OF AIC

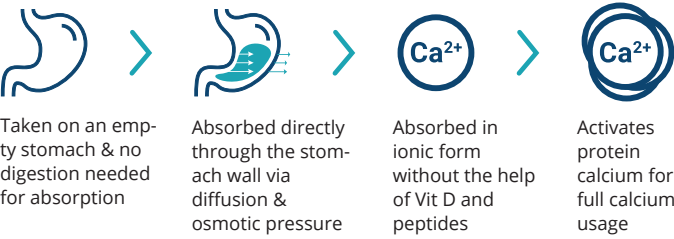

BENEFITS OF AIC THERAPY

- **AIC is safe** - Soliciting our body's natural sensitivity to plasma ionic calcium level changes, a tiny amount of AIC can safely trigger desired physiological responses. AIC therapy has no known side effects or contraindications.
- **AIC builds strong bones** - By triggering our body's natural bone remodeling process, AIC therapy builds strong bones as it remodels and repairs damages accumulated over the years.
- **AIC achieves body-wide de-calcification** - People get sick and die from calcification. AIC clears displaced calcium from soft tissues and joints by transporting it all back to where it belongs: our bones.
- **AIC restores cellular calcium homeostasis** - Too much calcium in cells is most toxic. AIC reduces oxidative stress, restores mitochondrial function, and corrects calcium wave signaling for proper cellular functions and repair.
- **AIC does much more** - regulates body pH, enhances oxygen delivery, inhibits pathogen proliferation, and eases inflammation.

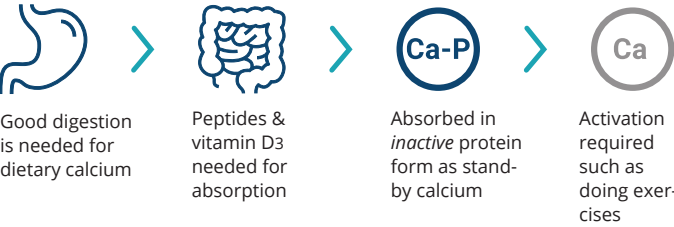

DIRECT IONIC ABSORPTION OF AIC

Unlike regular calcium intake, AIC diffuses passively through stomach walls (mucosa) as ions without the help of Vitamin D3 and peptides. Therefore, AIC absorption does not require physiological energy from our body, and calcium ions are readily available for immediate use.

TYPICAL CALCIUM ABSORPTION IN PROTEIN FORM

Natural calcium intake from diet or supplements needs strong stomach acid with the help of peptides and vitamin D3 for absorption in *inactive* protein-form, which may contribute to more calcification with aging.

AIC THERAPY WORKS BY RESTORING IMPORTANT CELLULAR FUNCTIONS THAT DETERIORATE WITH AGING. OUR PARTICIPATING PHYSICIANS USED AIC THERAPY SUCCESSFULLY FOR THE FOLLOWING CONDITIONS:

- Autoimmune diseases
 - Viral & Bacterial infections
 - Alzheimer's, Parkinson's
 - Arthritis, Gout, CPPD
 - Mitochondrial Disease
 - Various Cancers & Leukemia
 - Heart disease, Arrhythmia
 - Diabetes, Metabolic Syndrome
 - Thrombosis, Hemolytic Anemia
 - Autism Spectrum Disorder
- ADHD, Epilepsy
 - Asthma, COPD
 - Ocular Diseases
 - Meniere's Disease, Aurora Migrain Disease, Tinnitus
 - Osteoporosis, Bone Necrosis
 - Chromosome 8 syndrome
 - Chronic Kidney Disease
 - Gum disease, Loose teeth
 - Calcific tendonitis, Stones
 - Dysmenorrhea, infertility

And many more. There are more than 150 calcium-related diseases that cause secondary autoimmune and inflammatory responses.
